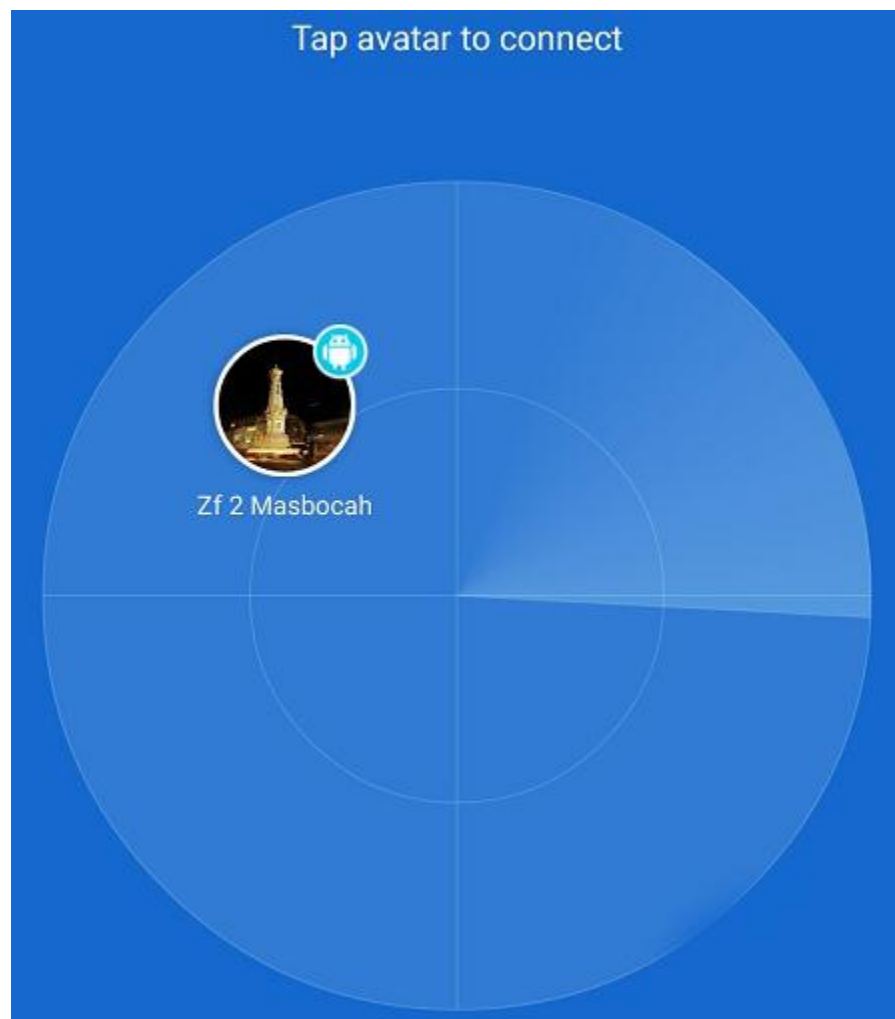
1. Note the picture above. Click the Send button on the sender device (phone A), and the click of a button Receive on the receiving device (phone B).

On phone A, it will appear the options category files that you can send. Please choose as you please, then continue. Or, you can also directly choose the files you want, through the file manager or maybe the gallery -> select files -> click share icon -> select ShareIt.

2. Well after we already select a file to send on phone A and already proceed to the next stage, then phone A will start to detect the device is ready to accept you the way you are file, and the display will appear like this :


Click the icon that displays the name of the receiving device (phone B), and the file will be sent automatically after connected successfully.

TIPS : You can change the name and icon/avatar of the devices you use, so that later it is easier to distinguish between your device with other devices.

Transfer Files from your Smartpone / Tablet to Laptop

To send files or data from the smartphone to the laptop via Wireless by using the ShareIt is actually almost similar to that already mimin mentioned above, just that there are a few additional steps as follows :

1. On our laptop (the recipient), please go to ShareIt and click the button receive. Then, the application will display the icon as in the image below, click image screen of the smartphone there.

After you click, the app will display a QR code to simplify the connection process later.

On the smartphone (the sender) follow steps 1 and 2 above, but when the smartphone is already beginning to detect the device, you need to press the button Connect to PC that are on the bottom of the screen.

2. Then on the screen of the phone the display will appear as in the picture below (left), please click the Scan button to connect.
